

Hämmerling The Tyre Company

We offer a wide range of products

SÄMM – High-quality retreaded truck tyres

Save money and protect the environment

Cost-effectiveness

The retreaded SÄMM is significantly cheaper than comparable new tyres, which reduces the total operating costs of the fleet. You can save even more with your own casing. When used properly, new tyres can be regrooved and retreaded up to two times.

Flexibility

Choose from 25 profiles for regional and long-distance transport, construction sites, waste disposal or trailers. Retreading makes it easy to change the area of application.

Reliability

After undergoing strict quality control, SÄMM truck tyres are a reliable alternative with driving characteristics and safety levels comparable to new tyres.

Sustainability

A new tyre requires around 80 liters of crude oil, while a retreaded SÄMM tyre requires only 30 liters. This saves up to 70% energy and 30% CO₂. For 100 tyres, this means six tons less emissions.

Tyre management

A system that pays off

A good fleet management system is the digital twin of a vehicle fleet. It enables you to manage your fleet in such a way that you can save up to **10% on fuel costs** and reduce CO₂ emissions.

Data-based analysis is crucial for effective fleet management, as tyres account for around **50% of a vehicle's operating costs**. Intelligent tyre solutions enable proactive

and sustainable tyre management, allowing tyres to be viewed as a valuable asset rather than just a cost factor.

Find your optimal tyre strategy and increase the efficiency of your vehicles. As a tyre partner with many years of experience, we are happy to help you implement this strategy.

Our own and exclusive brands

Certified quality and years of experience

ATHOS

Truck tyres

- Up to 5-tons payload
- Premium carcass
- TÜV tested and certified
- ISO 9001, 16949 and 17025
